

To whom it may concern,

Ayesha Seemab worked with us at Seidat as a Software Developer Trainee from February 2024 till July 2024 and reported to me in my position as Head of Software Development.

Ayesha had a fixed-term internship position as part of her studies in Helsinki Business College. The scope of the internship consisted of planning, development and delivery of a presentation template web store integrated into the main Seidat application and Seidat admin panel. Main technologies used: JavaScript, TypeScript, React, Node, MongoDB and Stripe.

As a trainee, Ayesha proved to be a capable software engineer. Coming in with already sufficient knowledge in the abovementioned technologies, she demonstrated great progress that exceeded my expectations. Her professional development in the company mainly came from getting familiar with the existing code base, code reviews and mentorship sessions. Ayesha took full responsibility for the delivery of the project and consulted directly with the company's management about the feature design and implementation. The feature is set to go in production at the end of summer 2024. During her traineeship, she also proactively chose to make several improvements to the product's existing features and fixed a few bugs. Ayesha is curious, always willing to learn new things and contribute outside of her scope of work.

Despite Ayesha's success in the role, we were unable to offer her a full-time position due to the company's ongoing cost-saving efforts. Without any hesitation, I'd like to recommend her for a full-time paid position. Should you have any further questions, feel free to reach me at artem@seidat.com.

Best,
Artem Kondratev
